One system. Two ways to use it.

Passengers share what needs improving. Staff manage the information and respond through a separate protected portal.

Passenger website

PUBLIC MAP & FEEDBACK

- Browse published stops on a map
- Choose an exact boarding point
- Send feedback & optional photos
- Read anonymous issues and replies

Map background: OpenStreetMap

Share & browse

Shared information

SUPABASE CLOUD SERVICES

- Stops & boarding points
- Feedback & team replies
- Private photo storage
- Accounts & permissions

Review & manage

Staff portal

PROTECTED WEBSITE

- Review feedback and reply
- Maintain and publish stop data
- Set categories, icons and photo rules
- Owner manages user access

Allowed network + personal login

Staff imports

Stop information comes from

EFA / STA + CSV files
Official municipality reference

Separate websites, shared information

Both websites run on Vercel. Only selected information is public; staff access is controlled separately.

From observation to response

Feedback belongs to one selected boarding point, so the team knows exactly where the issue was reported.

A stop place groups its boarding points

Example: railway station → platform 1 / platform 2. The passenger selects the relevant point.

1 Choose a point

Open the map and select the exact platform or boarding point.

2 Describe the issue

Select categories, add a short note and optionally attach a photo.

3 Team reviews

Authorized staff read the full report and can update its status.

4 Team responds

Staff with reply permission can publish a response for passengers.

Visible to passengers

Published stop information, selected issue categories, dates and the team’s public replies.

Kept in the staff area

Free-text descriptions, uploaded photos and contact details. Contact details are collected only with consent.

Access is controlled in layers

The staff portal requires an allowed network, a personal login and the right permission for each task.

Allowed network

Vercel checks the visitor’s IP address before the protected portal loads.

Personal login

Supabase checks the account. Active users can change their own password.

Task permissions

The data service checks rights again before protected records are read or changed.

Permissions are building blocks

The owner combines permissions for each account.

Read feedback

View the inbox and full reports.

Reply to feedback

A separate right, requiring inbox access.

Maintain stop information

Separate rights for imports and database editing.

Manage the feedback form

Edit categories, SVG icons, order and photo limits.

OWNER ONLY Create accounts, grant permissions and deactivate access. Existing reports and replies are retained.

Current information. Lasting history.

Staff control what appears on the map, while past feedback remains available for review and evaluation.

Bring in stop data

Import EFA / STA stop places and CSV files for places and boarding points.

Review and enrich

Edit names, coordinates and transport type. Fill missing municipality names from official references.

Publish for passengers

Only published, non-archived stop places and their points are available in the public map.

Operational history

Retiring a stop or deactivating a category retains earlier feedback. Existing reports and replies can still be reviewed.

Official testing dataset

New reports are also captured as frozen snapshots for evaluation, while testing capture is enabled. Contact details, notes and photos are excluded.
